BEM Flat File Structure

```
📁 project-root
   📁 blocks        ← contains a block.css file for each block in the project
      header.css
      footer.css
      logo.css
      menu.css
   📁 pages
      index.css     ← import all of your block.css files into index.css
   📁 vendor
      📁 fonts       ← also contains all font files
         fonts.css
      normalize.css
   index.html
```
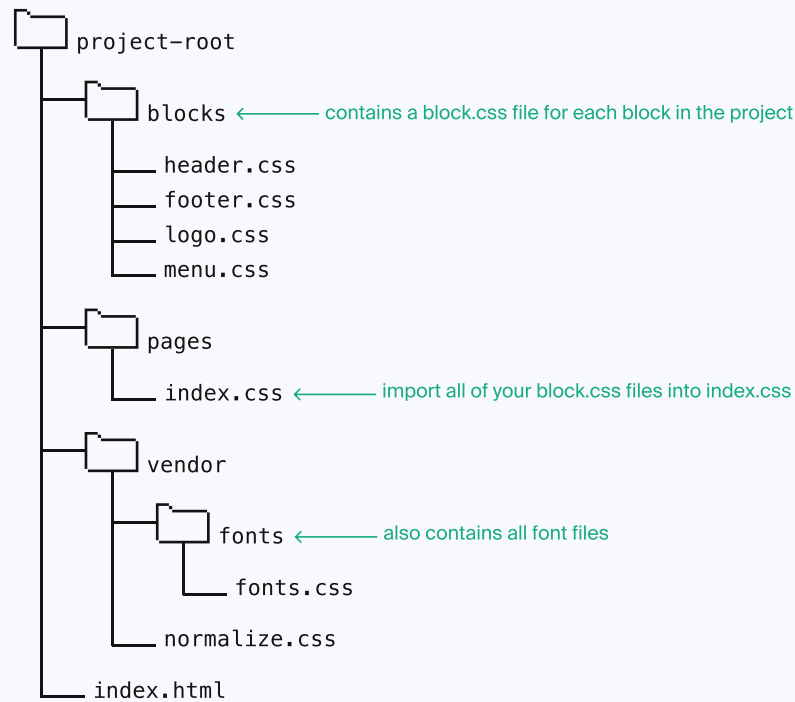

How to link `index.css` to `index.html`

```html
<link rel="stylesheet" href="pages/index.css">
```

How to import files into `index.css`

```css
@import url("../vendor/normalize.css");
@import url("../vendor/fonts/fonts.css");
@import url("../blocks/header.css");      /* ... do this for each of your blocks ... */
```

How to arrange the style declarations within each block.css file

```css
.block { /* block styles go first */ }

.block_mod { /* then all block modifiers */ }
.block_mod-key_mod-val { /* ... */ }

.block__element { /* then each element of the block */ }
.block__element_mod { /* followed immediately by all of that element's modifiers */ }
.block__element_mod-key_mod-val { /* ... */ }
```
